## Cover story: Allied-Gator introduces shear tip technology

Allied-Gator has introduced the patented Stealth Tip, available exclusively for the company's patented MT mobile shear. The Stealth Tip has been designed to provide increased piercing performance while continuing to lower the operational and maintenance costs associated with mobile shearing.

The Stealth Tip is an assembly which is specifically designed to engage and retain a pair of long-lasting, replaceable inserts. A single bolt secures the inserts, for field-changes of less than two minutes. These tough, durable inserts are also extremely

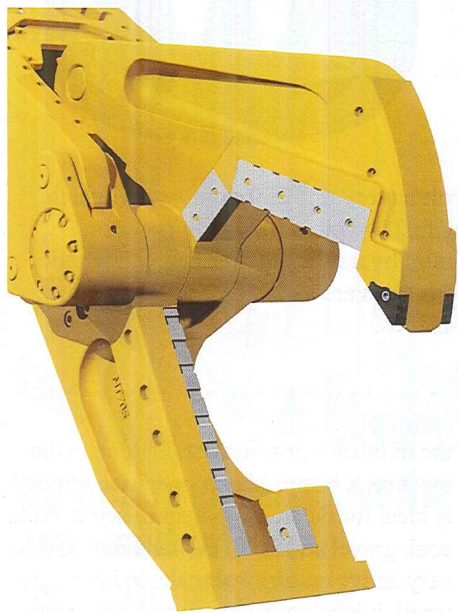

affordable and fully weld-maintainable, allowing them to be resurfaced and re-used multiple times.

"The Stealth Tip is a breakthrough in piercing dynamics," says Mike Ramun, Allied-Gator's sales and marketing manager. "This shear tip design allows the MT shear jaw to pierce more effectively and with far less effort, which equates to better overall cutting performance with lower operating and maintenance costs."

Unlike other designs, Ramun says, the Stealth Tip does not compromise the integrity of the shear knife because it is an independent weld-on component that can quickly be replaced should damage

ever occur. This feature also allows users the versatility to utilize the previously standard solid weld-on shear tip, which is still available for the MT mobile shear. The patented Allied-Gator Stealth Tip is immediately available and accommodates all new and existing MT shear models ranging in sizes from the MT 15 through the MT 160. Allied-Gator MT shears also feature patented Serrated Gator Blades which substantially enhance cutting performance of all 11 MT shear sizes and extend blade life up to three to four times longer than standard mobile shears when cutting scrap materials.

OEM ATTACHMENTS FOR MANY APPLICATIONS

CUSTOMIZED BOOM AND STICK CONFIGURATIONS

BUILT-IN SAFETY, PRODUCTIVITY AND COMFORT

FUEL EFFICIENT/ LONG LIFE AND EASY MAINTENANCE

WHEELED/CRAWLER/RAIL/ PEDESTAL/GANTRY AND CUSTOM MOUNTS

# Purpose-built from the ground up

Scrap handlers from **SENNEBOGEN** - 44,000 lbs. to 750,000 lbs.  
Simple design... Lift more. Move faster. Save fuel. Run longer.

### Compact bucket crushers

Atlas Copco's compact bucket crushers allow operators on construction, demolition and trenching worksites to quickly and effectively pulverize asphalt, concrete and stone, even in tight spaces. Operators can re-use the material on site or sell it. This creates a new revenue stream and reduces transportation and dumpsite expenses. These bucket crushers also eliminate the need for additional crushing equipment. Atlas Copco says they designed their compact bucket crushers to provide a long service life with replaceable top and bottom jaws, as well as single jaws that can be rotated. Four models are available, with output diameters ranging from 0.5 to 4.75 inches.

Introducing the Patented **Stealth Tip<sup>™</sup>**

# MT<sup>®</sup>

Allied-Gator<sup>®</sup> introduces the patented **Stealth Tip<sup>™</sup>**, available exclusively for the patented **MT<sup>®</sup>** mobile shear.

The **Stealth Tip** has been designed to provide increased piercing performance while continuing to lower the operational and maintenance costs associated with mobile shearing.

The **Stealth Tip** is an assembly which is specifically designed to engage and retain a pair of long-lasting, replaceable inserts. A single bolt secures the inserts allowing them to be field-changed in less than 2 minutes. These tough, durable inserts are extremely affordable and fully weld-maintainable, enabling them to be resurfaced and reused multiple times.

Unlike other designs, the **Stealth Tip** does not compromise the integrity of the shear knife because it is an independent weld-on component that can quickly be replaced should damage ever occur. This feature also allows users the versatility to, at-any-time, utilize the previously standard solid weld-on shear tip which is still available for the **MT** mobile shear.

The patented **Allied-Gator Stealth Tip** is immediately available and accommodates all new and existing **MT** shear models ranging in sizes from the MT 15 through the MT 160.
