

CHANGING THE INDUSTRY, ONE **JAW SET** AT A TIME

Tired of dealing with light material that eats up space and shearing time? The new Allied-Gator Quick-Change™ MT™ Densifier™ Jaw Set for the patented MT™ Series Multi-Tool is *not* just another grapple. Find out how this new densifying technology from Allied-Gator has forever changed the concept of material handling.

When processing thin or voluminous materials that contain a great deal of air space, a shear traditionally has to make numerous cuts—all causing wear on the shear blades—for relatively little productivity. Allied-Gator customers can now utilize the MT™ Densifier™ Jaw Set to turn that light scrap into compressed bundles that are later easily processed to the desired lengths by the MT Shear Jaw Set.

According to Mike Ramun, Allied-Gator sales and marketing representative, "The MT Densifier Jaw Set was initially designed to perform all the functions of a rotating grapple; however, we quickly realized that its extreme power and ability to condense material put it into an entirely new category. It is truly a *densifier*," says Mike. "This grapple-type jaw closes with so much force that it can be used to literally bale and condense scrap, removing the air volume from the material, which then allows the MT Shear Jaw Set to process the material in fewer cuts."

While the MT Series tools are already used to shear scrap metal with the Shear Jaw Set and process concrete, cast and rail material with the Cracker/Crusher Jaw Set, Allied-Gator has continued to introduce innovative configurations and patented Quick-Change™ Jaw Sets that allow MT Series owners to take on additional tasks using their durable, cast steel MT tools.

The MT Densifier Jaw Set can be added to and removed from an MT Series Multi-Tool unit in just 15 to 20 minutes. It can be quickly interchanged with the MT Shear and Cracker/Crusher Jaw Sets, providing demolition and recycling professionals the versatility to perform all shearing, crushing, material handling and densifying needs on site *effectively* with one tool.

The Densifier Jaw Set is also used in the demolition industry to crush, sort and separate structural members, including buildings, concrete slabs and bridge decks. Additionally, the MT Densifier Jaw Set compresses piles of on-site material and debris during the load-out process, resulting in incredibly dense truckloads that greatly reduce material transportation costs.

Allied-Gator is confident that scrap processors who go to the Allied-Gator Web site or call Allied-Gator to see a demonstration will see the advantages for themselves. "There are a multitude of ways in which the MT Densifier Jaw Set will positively impact an operation," says Mike.

He concludes, "A machine operator that recently tested this tool joked that if he used the MT Densifier Jaw Set on one of two car bodies parked side-by-side, he could fit the first car in the glove compartment of the second." Now, *that's* dense.
